- Adjustable height work table for sealing packages of different heights
- Heating element found on the upper jaw of the sealer
- Included: film roller, twin perforating hole punch, film separator, work table, and up right heat gun holder (w/ built in electrical outlet)

W-Series L-Bar Sealers are designed for easy and quick shrink wrap packaging. Users can produce products that have a factory fresh clean look and feel. Our L-bar sealers create packages that are free from dust, moisture, and fingerprints regardless of shape. Discourage tampering and shoplifting with our shrink wrapping system.

One step will seal and cut film up to 26" wide depending on the model of the sealer. The durable steel construction ensures durability and quality. Sealing time is controlled by an electronic timer. All W-Series L-Bar sealers are equipped with a film roller, twin perforating hole punch, film separator, work table, and up right heat gun holder.

Easy to Operate: Set the timer. Insert your product between two layers of centerfold film and press down on the sealing bar. Slightly pull the package away from the machine. The element wire will seal the edge and cut off the film. Apply hot air using a heat gun to shrink film tightly around the package
